DOJ Forensic Laboratory Needs-Technology Working Group

NEWS FOR IMMEDIATE RELEASE

June 1, 2018

The American Society of Crime Laboratory Directors (ASCLD) applauds the United States Department of Justice (DOJ) for the announcement of the Forensic Laboratory Needs - Technology Working Group (FLN-TWG). We are thankful that the DOJ announced this new initiative through Dr. Howard Spivak during the 45th annual ASCLD meeting in Atlanta on May 24th. ASCLD has eagerly engaged with DOJ on a number of forensic science issues, and the participation of Dr. Spivak was appreciated. ASCLD has long advocated in Congress and at DOJ for a working group of state and local forensic laboratory directors to advise DOJ on technical, research, and operational needs.

The National Institute of Justice (NIJ) and the Forensic Technology Center of Excellence (FTCoE) at RTI International (Research Triangle Institute) are important partners with ASCLD in advancing forensic science. “ASCLD members represent state and local labs in NIJ listening sessions regarding federal grant spending and priorities, operational needs assessments, evaluation of forensic science research needs, and technology transfer to forensic science laboratories. The FLN-TWG is a phenomenal new opportunity for ASCLD members to engage DOJ on a number of important topics,” said ASCLD President Matthew Gamette.

ASCLD appreciates the inclusion of at least 13 laboratory directors who are ASCLD members on the FLN-TWG. These scientists/practitioners lead some of the most prestigious forensic science laboratories in the United States. The heavy participation of ASCLD members in the anticipated regularly scheduled FLN-TWG meetings will improve the federal government’s knowledge and understanding of forensic technology, as well as the operational needs of federal, state, local, and tribal forensic science practitioners and laboratories. The FLN-TWG will ensure robust and routine communication between state and local forensic practitioners and NIJ.
As outlined in our National Outreach Priorities and Agenda (NOPA), ASCLD encourages DOJ to continue steps toward the development of a central, independent body within DOJ that coordinates DOJ efforts related to forensic science with a mission that is solely forensic science focused.

ASCLD anticipates increasing engagement with federal partners to provide forensic science service providers with the research, training, technology, support, and other operational needs necessary to advance the scientific integrity of forensic science in the United States. ASCLD is a nonprofit professional society of over 600 members representing local, state, federal, private, and international crime laboratory directors, managers, and supervisors; it is dedicated to provide excellence in forensic science through leadership and innovation. Members consist of biologists, chemists, document examiners, firearms analysts, pattern evidence examiners, physicists, toxicologists, educators, researchers, instructors, and law enforcement officers with a wide range of experience and knowledge, whose major function is the management of a crime laboratory. The purpose of the organization is to foster professional interests; assist the development of laboratory management principles and techniques; acquire, preserve and disseminate forensic based information; maintain and improve communications among crime laboratory directors; and to promote, encourage and maintain the highest standards of practice in the field.
